7 AI Prompts to Crack Your Next Interview

Copy • Paste • Customize • Practice

A practical guide to preparing your resume, interview answers, projects, and job search with AI.

Inside this guide

• 01 — Build a resume that stands out

• 02 — Find your skill gaps

• 03 — Practice a realistic mock interview

• 04 — Turn your project into interview gold

• 05 — Write messages recruiters notice

• 06 — Build a focused preparation plan

• 07 — Create a targeted job-search strategy

A resource from @codewith_govind

PROMPT 01

Build a Resume That Stands Out

Use this to make your real skills, projects, and experience easier for recruiters to scan.

Copy and paste this prompt:

Act as an expert resume strategist. Review my resume and transform it into a clear, achievement-focused resume that highlights my strongest skills, projects, and experience. Keep every claim truthful and make it easy for recruiters to scan in 10 seconds.

How to get better results: *Paste your current resume and, if possible, the target job description. Never add achievements or skills you cannot support.*

PROMPT 02

Find Your Skill Gaps

Compare your current preparation with the requirements of a specific role.

Copy and paste this prompt:

Compare my current skills and projects with this job description. Identify my top 5 skill gaps, separate must-have skills from nice-to-have skills, and create a practical 14-day learning plan to improve my fit for this role.

How to get better results: *Include the complete job description and an honest list of your current skills and projects.*

PROMPT 03

Practice Like It's the Real Interview

Turn AI into an interactive interviewer that asks one question at a time.

Copy and paste this prompt:

Act as a strict interviewer for the role of [Job Title]. Ask me one question at a time, wait for my answer, evaluate my response, point out weaknesses, and show me how to answer more clearly. Increase the difficulty as I improve.

How to get better results: *Answer each question yourself before asking for feedback. Use feedback to improve clarity, depth, and structure.*

PROMPT 04

Turn Your Project Into Interview Gold

Prepare to explain the decisions, architecture, and trade-offs behind your actual project.

Copy and paste this prompt:

Analyze my project [Project Details]. Generate the most challenging questions about its architecture, technology choices, database design, scalability, security, and trade-offs. Give me beginner-to-advanced questions with sample answers based only on what my project actually does.

How to get better results: *Provide your real architecture, stack, database design, and implemented features. Do not claim features your project does not have.*

PROMPT 05

Write Messages Recruiters Notice

Create a concise, personalized message for a recruiter or hiring contact.

Copy and paste this prompt:

Write a short, personalized LinkedIn message to a recruiter for [Job Role] at [Company]. Connect my most relevant skills or project to the position, express genuine interest, and end with a polite request to discuss the opportunity. Avoid generic or desperate language.

How to get better results: *Add the company, job title, and one genuine reason the role interests you. Review the message before sending.*

PROMPT 06

Prepare Smarter, Not Longer

Build a preparation schedule around the time you have before the interview.

Copy and paste this prompt:

I have [X] days before my interview for [Role]. Based on the job description and my current knowledge, prioritize the highest-impact topics, likely interview rounds, coding patterns, and practical exercises. Build a daily study schedule with revision and mock interviews.

How to get better results: *State how many hours per day you can study and your current comfort level with each topic.*

PROMPT 07

Create Your Job-Search Strategy

Identify roles that fit your skills and build a consistent application routine.

Copy and paste this prompt:

Act as my career coach. Based on my resume, projects, skills, and experience, identify the 5 job titles I should target first. Explain why each fits, what companies typically expect, which skills I should strengthen, and how to build a weekly application strategy.

How to get better results: *Use suggested job titles as a starting point, then verify them against real job descriptions and eligibility requirements.*

How to Use These Prompts

1. Customize placeholders. Replace [Job Title], [Company], [X], and [Project Details] with your real information.

2. Add useful context. Include your resume, job description, project details, and preparation timeline when relevant.

3. Ask follow-up questions. Request examples, clearer explanations, or another practice round if an answer is too generic.

4. Verify the output. AI can make mistakes. Check technical answers, company requirements, and facts before using them.

5. Stay truthful. Never add fabricated skills, project features, achievements, or experience to your resume or interview answers.

Save this guide and use one prompt at a time.
